

Using Augmented Reality (AR) Simulations with NCCER Core 6e

What is augmented reality (AR)?

Augmented reality (AR) is technology that enhances or *augments* your experience of the world around you.

AR is the rendering of digital images or data onto real-world objects. It integrates and adds value to your interaction with the real world.

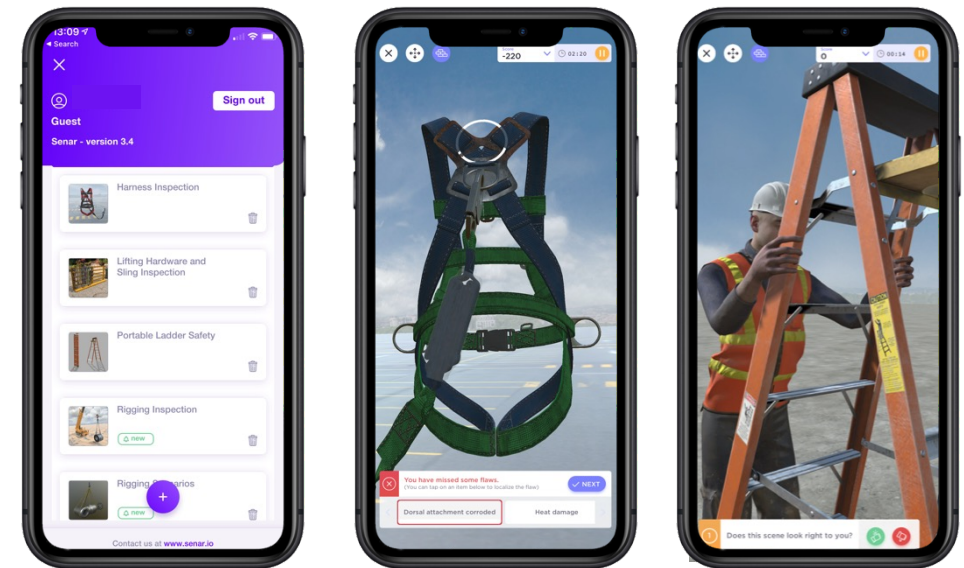

AR is increasingly used in construction for tasks such as project planning, field measurements, on-site project information, and safety training.

Using AR simulators with NCCER Core 6e

NCCER has partnered with **SENAR** to include access to AR simulators as part of your Core 6e training experience. You have access to five AR simulators:

- Harness Inspection
- Portable Ladder Safety
- Lifting Hardware and Sling Inspection
- Rigging Inspection
- Rigging: Audit of Load

Using AR simulators with NCCER Core 6e

With Core, you have access to five AR simulators that align with performance objectives in two of the course modules:

- **Module 00101, Basic Safety**
 - Harness Inspection
 - Portable Ladder Safety
- **Module 00106, Introduction to Basic Rigging**
 - Lifting Hardware and Sling Inspection
 - Rigging Inspection
 - Rigging: Audit of Load

Getting Started with SENAR

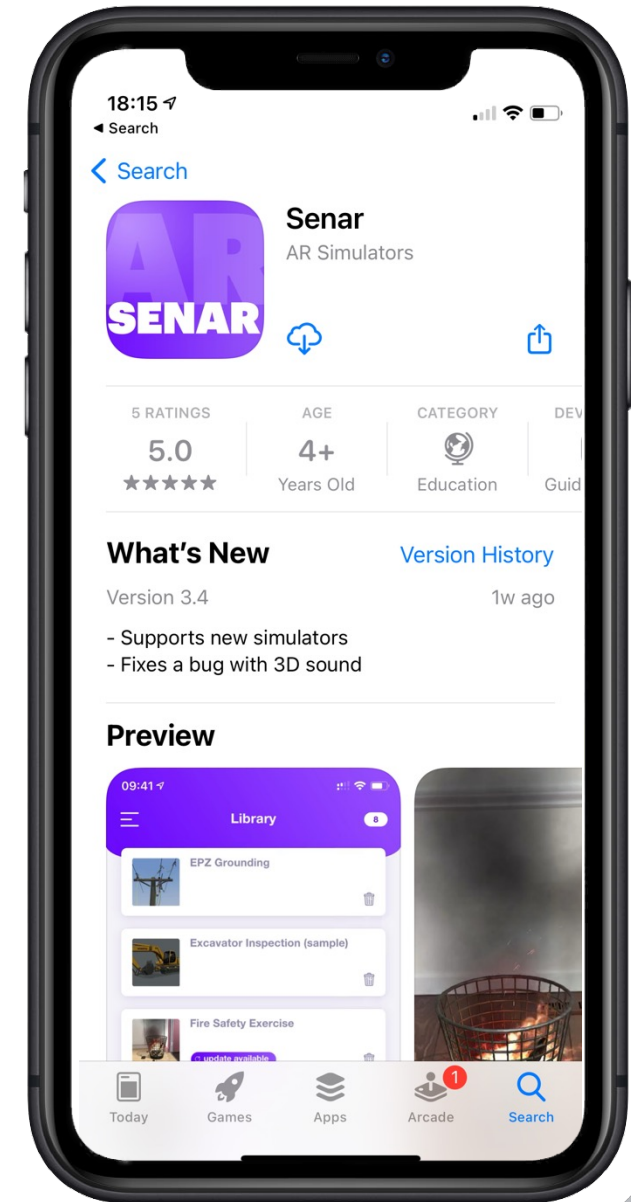

Download, Install, and Set Up the SENAR Application

Download and install the SENAR app

As a first step, **download and install the SENAR app** from the Apple App Store or Google Play.

The application works on both Apple iOS and Android devices and is generally compatible with devices from 2017 or later. For a complete list of compatible devices, click [here](#).

After the app is installed, **open the SENAR app on your device.**

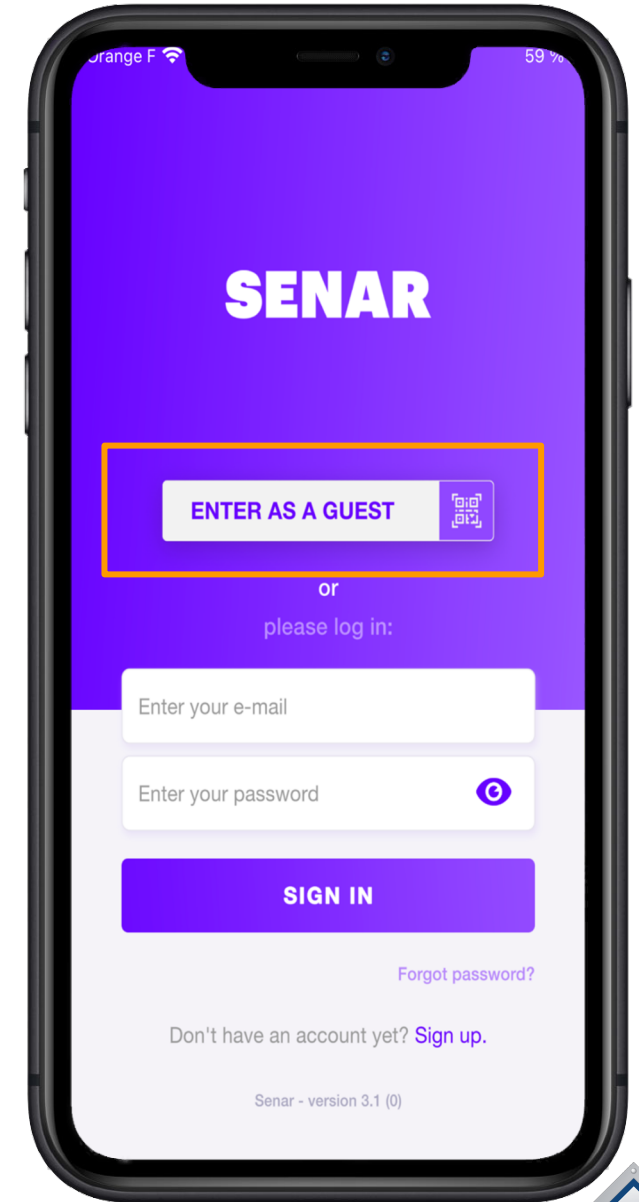

Log into the SENAR app

The first time you open the SENAR app, you will be prompted to log in *or* enter as a guest.

Click the **ENTER AS A GUEST** button to proceed.

If prompted, give the SENAR app the ability to access your camera. You will need this in the next step.

Scan the QR code

Next, you will need to **use the SENAR app to scan the QR code** at right.

Scanning this code will allow you to access the NCCER Core AR Simulator library.

Note: you must scan this using the SENAR app.

To start a training session, scan this code using the SENAR app.

NCCER Core Digital Resources

NCCER Simulations

Set up your profile

Enter your **first name**, **last name**, and **organization** in the next screen. (If you're not sure of your organization name, just enter NCCER).

As long as you stay logged in, you will only have to do this step one time.

Click the **START button** to access the library screen.

The image shows a smartphone screen with a white background. At the top, there is a green checkmark icon followed by the text "Session activated". Below this, there are three white input fields with rounded corners, each containing a placeholder label: "First Name", "Last Name", and "Organization". At the bottom of the form is a purple rectangular button with the word "START" in white capital letters.

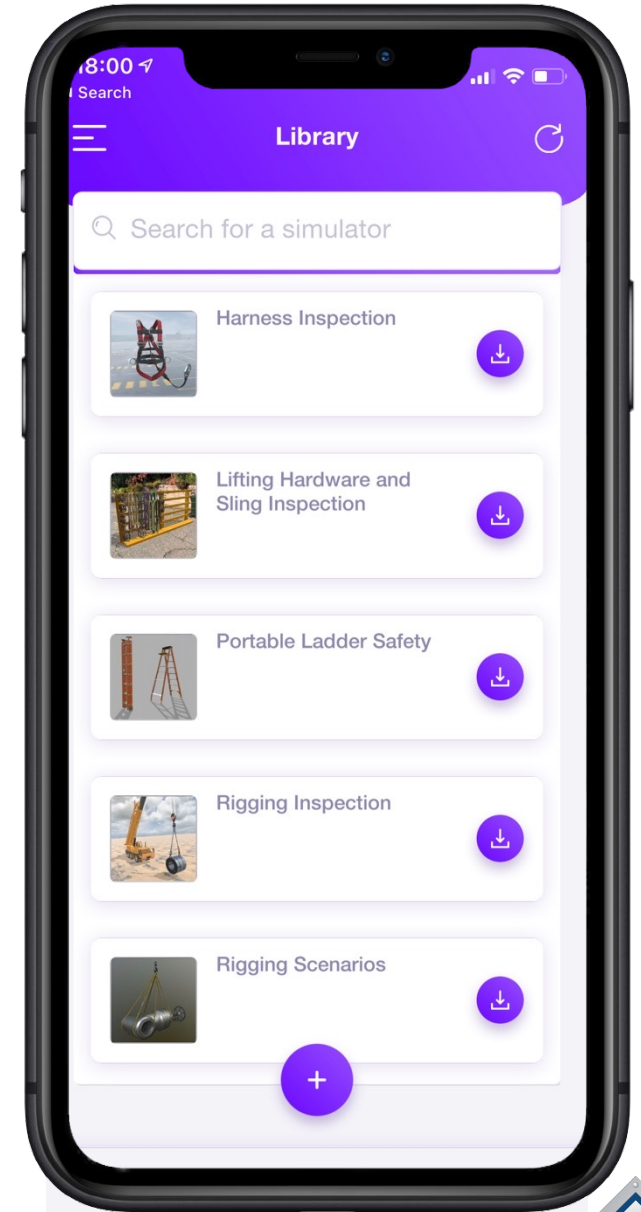

Download the AR simulators

After you have clicked START and logged in, you will want to download the simulators you wish to use.

You can download a simulator by tapping the **purple download button** next to its name.

Once downloaded, tap a **simulator's name** to launch it.

Position the AR simulators

Before you get started, you will need to position the simulator. The steps to position an AR simulator are simple.

1. First, **scan your environment** (walls, floor, furniture) for about 20 seconds.
2. Once the target is following your movements perfectly, **aim at the location** where you'd like to place the simulator.
3. Next, **tap the blue check mark** at the bottom right of your screen.

Navigate in an AR simulator

Once positioned, the simulator is part of your environment: you can move around it as if it were a real object.

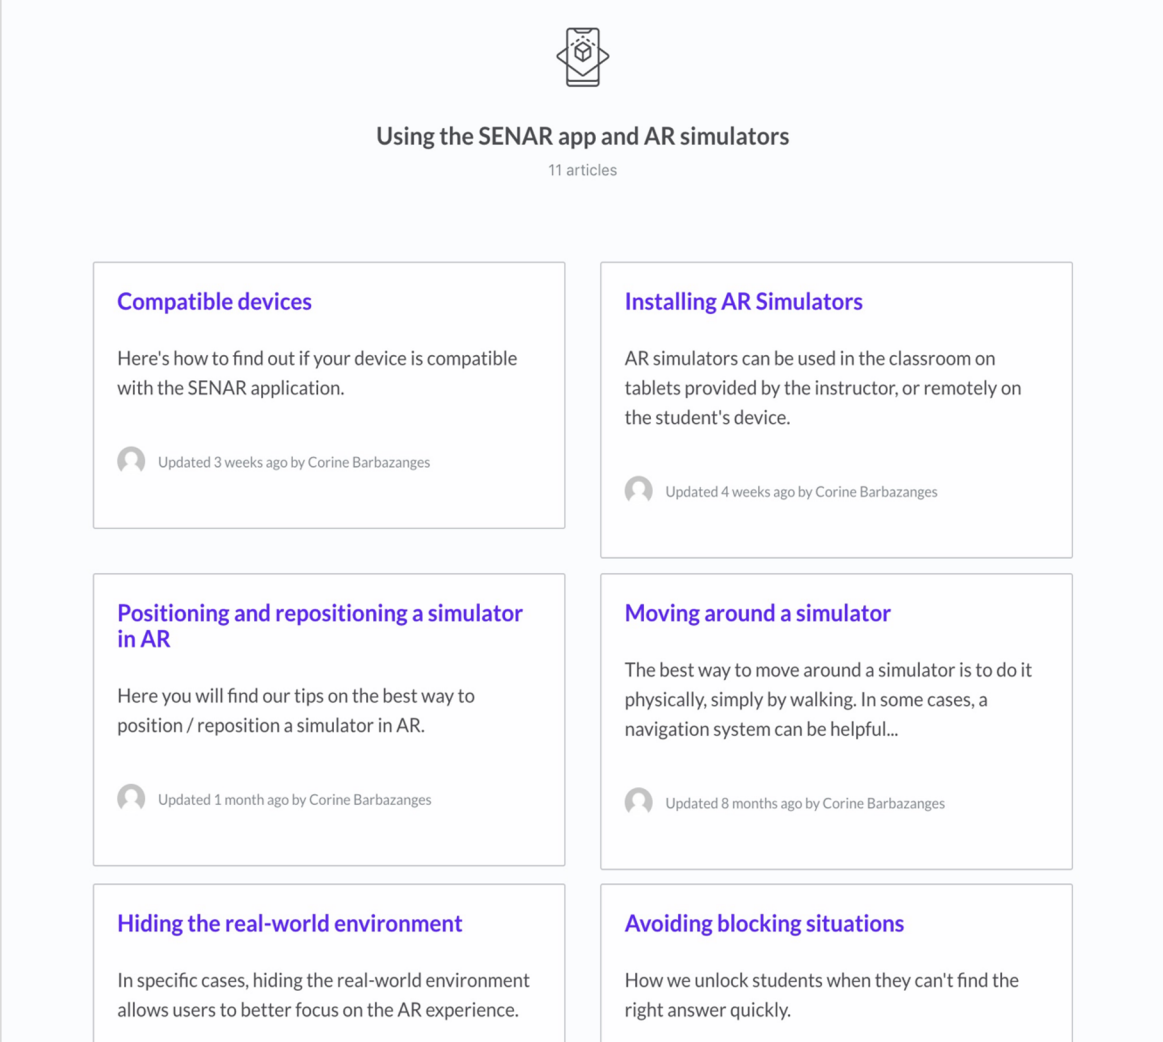

Note: not every AR simulator will have all of these buttons, depending on the functionality inside of the specific simulator.

Need more help?

SENAR has a rich collection of online help for trainees and instructors.

Check out SENAR online help via the [SENAR Knowledge Base.](#)

The screenshot displays a user interface for the SENAR Knowledge Base. At the top center, there is a mobile phone icon with a gear, representing the app. Below it, the title "Using the SENAR app and AR simulators" is shown, followed by "11 articles". The main content area is a grid of six article cards. Each card has a title in purple, a brief description, and a small profile icon with the text "Updated [time] ago by Corine Barbazanges".

- Compatible devices**: Here's how to find out if your device is compatible with the SENAR application. Updated 3 weeks ago by Corine Barbazanges.
- Installing AR Simulators**: AR simulators can be used in the classroom on tablets provided by the instructor, or remotely on the student's device. Updated 4 weeks ago by Corine Barbazanges.
- Positioning and repositioning a simulator in AR**: Here you will find our tips on the best way to position / reposition a simulator in AR. Updated 1 month ago by Corine Barbazanges.
- Moving around a simulator**: The best way to move around a simulator is to do it physically, simply by walking. In some cases, a navigation system can be helpful... Updated 8 months ago by Corine Barbazanges.
- Hiding the real-world environment**: In specific cases, hiding the real-world environment allows users to better focus on the AR experience.
- Avoiding blocking situations**: How we unlock students when they can't find the right answer quickly.

Using AR simulators with Module 00106: Introduction to Basic Rigging

Lifting Hardware and Sling Inspection

Lifting Hardware & Sling Inspection AR Simulator

This simulator has Levels 1 and 2 for trainees to inspect a series of lifting hardware and slings.

LIFTING HARDWARE & SLING INSPECTION

- **Your mission: You must select and inspect the slings and lifting hardware to determine if they are safe to use.**
- Trainees have two levels that last about 15 minutes to review a wide range of slings and hardware to look for flaws and issues.

- This simulator has trainees inspect many different types of lifting hardware and slings.
- Trainees can select these items in any order from a rack.
- Trainees then must determine if the lifting hardware and slings are safe.
- Quick tips:
 - Some of the lifting hardware is safe, some are not.
 - After you answer, a pulsing circle will point out potential flaws.

Other learning tips for using AR simulators

Below are some additional ideas on how to engage with an AR simulator:

- **Explore and have fun.** Some of these simulators will be challenging, but it's a safe and fun way to practice and learn!
- Feeling stuck? **Use the NCCER Core 6e Trainee Guide as a reference** while in the simulator experience – or just ask a classmate.
- **Don't worry about scores or time.** These experiences are about learning!
- Engage fully with the simulator. **Stand up and move around** the objects, just as if they were real. Lean in to look for flaws or inspect tags and weights.
- **Take screenshots** while in the simulator to capture interesting things you find *or* scores and timers at the end of the simulation.
